D1 Review task	necessity, comment generation, defect detection, refinement, triage, evaluation
D2 Model adaptation	pre-training, fine-tuning, PEFT, prompting, RAG, RL, data-centric, distillation
D3 System architecture	single call, generator + filter, multi-agent, tool-using, hybrid with static analysis
D4 Context scope	hunk, function/slice, file, cross-file/repository, non-code intent
D5 Evaluation regime	text similarity, LLM judge, issue-level P/R, tests, field outcomes, RCTs
D6 Deployment and cost *new*	frontier API, self-hosted, small/local, cascade/routing, cost reported or not
D7 Trust and risk *new*	precision control, hallucination, adversarial robustness, human factors, privacy

D6 and D7 are the main additions over prior task-centred taxonomies.
